AH-IMMUCURE ABC (NUTRIENT SUPPLIMENT)

US AND WORLD PATENT PRODUCT

(ANCIENT INDIAN TREATMENT AYURVEDA?)

AYURVEDA IS THE HEALING SCIENCE OF ANCIENT INDIA. IT IS MORE THAN HEALING. IT IS A WAY OF MAINTAINING OUR THE WONDERFUL BODIES THAT WE HAVE BEEN BLESSED WITH AND, THUS, ENJOYING OUR LIFE. THE GREATEST ADVANTAGES OF NATURAL HEALING (AYURVEDA) ARE THAT THERE ARE NO SIDE EFFECTS, UNKNOWN AFTERMATH, OR ANY KIND OF SUFFERINGS IN THE BODY WHILE THE MEDICINE IS TAKING EFFECT. IT IS ONLY WHEN THESE BLESSINGS OF NATURE ARE ABUSED, THAT ONE BECOMES SICK AT BODY AND MIND. AYURVEDA IS THE OLDEST KNOWN SCIENCE OF HEALING IN INDIA.

(Formulation of AIDS (AH-IMMUCURE A/B/C)

AH-IMMUCURE A/B/C, the palliative healing formulation, is a mixture of Ayurvedic formulations which combines many different natural herbs, minerals, and metals in approved limits; developed from formulas found in old ancient Ayurvedic books. This Ayurvedic treatment converts deadly fatal disease, AIDS, into chronic illness.

The formulation is developed by well experienced Ayurvedacharya (Ayurvedic Doctors), who possess knowledge based on the old Indian Ayurvedic system. Keeping in mind the western style of allopathic treatment, AHI has closely studied the success, failure, and side effects (if any) of AH-IMMUCURE ABC . All AHI research has been conducted by allopathic medical facility using the latest scientific study method.

Anupam Herbals have experimented and formed new combinations which have helped treat AIDS patients in ways like boosting immunity, purifying blood, helping to regain weight and making the entire body system as healthy and functional as that of a person

who is untouched by AIDs. This way the body, in time, strengthens itself to fight against AIDS (against complete disease). Therefore, these Ayurvedic formulations form the **very base** of our further research through which we hope to find a complete cure for AIDS (described below).

With these newly developed formulations, we have found that the patients under treatment start to regain weight within two to four weeks' time since the starting of AH-IMMUCURE A/B/C treatment. Due to the immunity booster action, their CD 4 / CD 8 count slowly returns to normal after 8 weeks. Along with the blood purifier and immunity booster action of the formulations, the viral count of the patients also starts to decrease during the course of the treatment and becomes nil after two months of treatment. The count and viral mutagenic nature remain under **control** as long as AH-IMMUCURE A/B/C is taken.

With AH-IMMUCURE A/B/C, there is no need of any other allopathic antiviral medications although both can be used together without any harm if the treating physician wants. Due to mutagenic character and notorious nature of AIDS virus, Anupam Herbals research lab recommends treating AIDS patients by providing treatment both ways; providing a much better result than any single modality of treatment. One side gives allopathic retroviral while the other side gives nutrient supplement [AH-IMMUCURE A/B/C] until cure is achieved [irrespective of AH-IMMUCURE A/B/C retroviral and mutagenic control action]. This way, in the long run, the treating physician gets a better control over HIV mutagenic character and multiplication.

AH-IMMUCURE A/B/C can be given with any type of medicine which is used for treatment of secondary infections without any side-effects or drug interactions. After 2 to 3 months of adding or treating AH-IMMUCURE A/B/C, the response of allopathic medicine given for treatment of secondary infection will become much better and faster than before. Along with this, the frequency of recurrent illness **comes down drastically.**

The overall positive response of AH-IMMUCURE A/B/C is variable, which depends as per immunity count at the beginning of the treatment. During the cd4 count of 150 and above, the addition of AH-IMMUCURE A/B/C in the treatment gives a wonderful response. The overall assessment of body defense is done on the basis of whole immunity [cd3, cd4, cd8], instead of relying only on cd4 count. Basic rule of thumb for better outcome is to start AH-IMMUCURE A/B/C early.

Many times, in cases of very low cd4 counts like 30 or 50 (especially in patients that are affected with intestinal infections), it is found that due to uncontrolled continuous attack of severe secondary infections the overall immunity of patients will go down drastically in spite of using AH-IMMUCURE A/B/C. Here company recommends that the patient's Immunity be raised artificially by giving immunoglobulin from outside. This way, for some time, the body is able to accumulate enough strength to fight against secondary infections while the AH-IMMUCURE A/B/C gets enough time to work and show its effects.

During the trial, after extensive clinical observations, Anupam Herbals got this treatment of AIDS. The constituent's safety is well described in Indian Ayurvedic pharmacopoeia and other standardized Indian Ayurvedic books.

Anupam Herbals has the best results as per the clinical trials, many of which are reading successfully today. To get best results Anupam Herbals has stayed with the old pattern of manufacturing by avoiding new age machines for commercial style manufacturing. This makes our formulation costlier than normal.

It has taken ANUPAM HERBALS about five years to get the desired results. We develop the formulas in such a way that there is no chance of any side effects. **In the next five to seven years that followed, through intensive testing and trials, we made this mixture marketable and economical without losing its potency and efficacy.**

In clinical study, minimum side effects like gastric acidity etc. were found. Only a few patients experienced mild headache, cough (that subsided soon after some time). However, no side effects such as fever, itching, vomiting, etc were found in any patients.

Currently, Anupam Herbals do not claim the cure. We should definitely be able to cure AIDS, but this requires that, we try and maintain the body immunity (CD4-CD8) near normal for long period till APOPTOSIS (hypothesis - described below) returns the body to its normal-healthy state.

Our hypothesis of cure is APOPTOSIS which is a normal body defense phenomenon governed by the body immunity. The main roles of cd4/cd8 cells are to control and destroy any HIV infected human cells and replace them with normal body cells (vague description). In this way, the body itself removes the infected cells. When cd4/cd8 count is exhausted, the capacity of self-defense of the body decreases and there is loss of APOPTOSIS. At this stage, the defence mechanism of the body fails and it is unable to stop the spread of AIDS in the body. This further leads to multiple infections like fungal/bacterial etc, followed by multiple system failures, causing death of the infected individual.

To break this positive vicious cycle, Anupam Herbals' Ayurvedic treatment is required. The formulation on one hand controls the multiplication of HIV virus to stop further damage of cd4 while on the other hand, it develops and maintains the body immunity for long durations, giving APOPTOSIS enough time to destroy the cells infected by the virus. Hence, a complete cure is achieved. The amount of time required to cure AIDS completely is still under study.
