

Frequently asked questions / answered by Anupam Herbals

INDEX

- Q-1) How long you have been doing research?
- Q-2) what is your formulation?
- Q-3) How did you develop his formulation?
- Q-4) Who did the research and where was it conducted?
- Q-5) What problem has been solved by this research?
- Q-6) What is the basic theme of AHI research?
- Q-7) Why one should take this Ayurvedic formulation- AH-IMMUCURE-A/B/C/ when so many other Anti-retroviral allopathic medicines are available in the market.
- Q-8) Any other advantage of AH-IMMUCURE A/B/C?
- Q-9) How does AH-IMMUCURE works at molecular level?
- Q-10) Describe AH-IMMUCURE-A/B/C formulation.
- Q-11) What is mutagenic character?
- Q-12) Describe if AHI work for cure?
- Q-13) Describe meaning of other problems that can be cured ?
- Q-14) Why do you think that AHI can get success to get cure of AIDS?
- Q-15) How many patients you took for trial?

Q-16) How long did the trial continued ?

Q-17) In such a long period why did you do trial for only 2 years?

Q-18) What is the dosage schedule per day?

Q-19) Any comments on tapering of dosage?

Q-20) You said patients will become normal in just two months? Is this uniform for all?

Q-21) Please explain Allopathic course of AIDS?

Q-22) Please explain your Ayurvedic course of AIDS?

Q-23) Please explain type of trial U did?

Q-24) What was the purpose of last trial?

Q-25) Please explain variation in dose?

Q-26) What protocol do you suggest if one partner is HIV positive but another negative?

Q-27) How would you judge cure in HIV negative carrier?

Q-28) Please suggest if one partner is HIV positive and another negative what protocol u suggest in their kids who are HIV negative?

Q-29) Please suggest dosage in HIV positive kids/children?

Q-30) What AHI recommend for children below 15 year?

Q-31) In children if you control AIDS virus then what AHI Recommend for immunity?

Q-32) How do you claim that your medicine is safe in long run?

Q-33) Do you suggest continent wise any dose variation ?

Q-34) What type of marketing do you suggest?

Q-35) Is there any variation in quality of medicine?

Q-36) How can you say that the trials conducted by Anupam Herbals are of that level that you can market the product?

Q-37) Can anyone use this medicine as a normal immunity Booster in health HIV negative cases

Q-38) Can AHI provides testimonials?

Q-39) What licenses U have?

Q-40) Can AHI proves that medicine is safe.

Q-41) When AHI gets patent?

Q-42) What type of patent?

Q-43) Can AHI reduces time period of treatment

Detailed Description

Q-1) Since,how long you have been doing research on AIDS?

Ans: Actual research we started in the year 2001. Although the work on AIDS was started by our panel of Ayurvedic doctors in the year 1996.

Q-2) What is your formulation?

Ans: It is based on alternative medical science called Ayurveda. The formulation is a combination of wide range age old Indian modality of treatment based on vast ancient literature available.

Q-3) How did you develop this formulation?

AHI have a team of very old and highly experienced Ayurvedic doctors called Ayurvedacharya as well as qualified allopathic doctors who have rich experience of not only clinical practice but that of research work as well in their respective fields .With extensive joint research work of doctors of both the sciences, AHI developed this Ayurvedic formulation for AIDS patients.

Q-4) Who did the research and where was it conducted?

Research was conducted by Dr. A. P. Yadav, a renowned allopathic physician based at Jaunpur(U.P). India.

I (Dr. Anupam Gupta) worked as a mediator and blended the knowledge gained from both the sciences; one is age old ancient Indian Ayurvedic medicine and second is modern Allopathic medicine. AHI created a new methodology called Allo-ayurvedic science, where AHI developed formulation in Ayurveda and conducted trial on the pattern as per allopathic science.

Q5) What problem has been solved by this research ?

In AIDS, AHI was able to convert deadly disease into chronic disease. Here the patients lead normal life to a great extent as their immunity returns back to normal within a couple of months of medication. The formulation also controls virus multiplication so that mutagenic character of virus is also controlled till this formulation is used by patients.

Q-6) what is the basic theme of AHI research ?

AIDS patient should not be affected with systemic failure till such time medicine will bring Immunity back to normal level after controlling viral multiplication.

Q7) Why one should take this Ayurvedic formulation- AH-IMMUCURE-A/B/C/ when so many other Anti-retroviral allopathic medicines are available in the market.

It has been proved clinically that AIDS patients who have taken AH-IMMUCURE A/ B/ C started regaining the weight as early as within 2 weeks after initiating the treatment. This will also revert back the Immunity, control virus multiplication and its mutagenic character. The drug has no side-effects , no problem even if the doses are missed out. In some patients it also acts as natural antibiotic against secondary infections though in a very low potency. So it is a complete solution for AIDS.

Q-8) Any other advantage of AH-IMMUCURE A/B/C?

AHI provides few ingredients in AH-IMMUCURE which also act as mild natural Antibiotics for secondary infections and some also work as haematinic, multivitamin etc.

Q-9) How does AH-IMMUCURE works at molecular level?

For hypotheses PI see patent write-up Web page 3.

Q-10) Describe AH-IMMUCURE-A/B/C formulation.

It is a mixture of around 100+ ingredients called Minero-herbal or Herbo-Mineral formulation. These are harmless, and have multi factorial active ingredients. The research team during the trial also used them in different indications than what were given in the books and got unpredictable results.

Q-11) What do you mean by mutagenic character?

The property of HIV (AIDS' virus) is such that it keeps changing its strain after three to four months, so the previous medicine which was quite effective in controlling the virus multiplications will no more be effective. In such situation the patients need to keep switching over to other group of drugs after every three to four months.

Q12) Describe if AHI works for cure?

As of now, we do not claim that AH-IMMUCURE cures AIDS but as it controls viral multiplications and its mutagenic nature, counteracting and nullify all its side effects, like; immunity destruction, weight loss and makes patients as normal human beings who are unaffected by AIDS. So AHI believes that in near future it is also possible to get cure too.

Q13) Describe meaning of other problems than can be cured with your formulation?

AHI takes care of other AIDS related problems such as loss of weight, multiplication of HIV, mutagenic effect of ARV drugs & lowering of immunity.

In other words AHI helps in weight gain, checks multiplication of HIV, no mutagenic effect and increases the immunity level of patients to fight viral infection.

Q14) Why do you think AHI can get success to get cure of AIDS?

In our team, we have one Ayurvedic doctor who has already cured three AIDS' patients. He successfully converted HIV positive patients to HIV Negative in three to five years of time. This remarkable achievement was also published in Newspapers in Chennai, Tamil Nadu (India). We know that there are certain ingredients in AHI which can cure AIDS and our ongoing research gives all the good indications that this product will eventually be used for the cure. But we are holding back our claim till we have sufficient data to prove that AH-IMMUCURE is a fool proof cure in AIDS.

Q15) How many patients you have taken for trial?

Around 50. Pl see RCT trial presentation.

Q16) How long did the trial continued ?

Initially, during research we took patients for trial for up-to two years. This is because; AHI has to work in different areas, like; formulation development, to minimize the side effects, improve the efficacy and on its other actions. Though one of our team members, who is no more with us, tried this formulation for a long term of up to 3 to 5 years and got success in making HIV negative in three HIV positive patients.

Now AHI is concentrating in taking full trial for cure and have decided to continue the therapy for minimum 5 years or more till we do not get HIV negative.

Q-17) In such a long period why did you do trial for only 2 years?

- First five year AHI developed the formulation.
 - In next few years research team tried to reduce side effects, make formulation affordable for the users, developed dose pattern etc. For reaching present stage of development AHI did trial only up to 2 years duration on one patient.
- Now in next phase of trial, AHI will continue medicine irrespective of the duration till the cure is achieved.

Q-18) What is the dosage schedule per day?

AHI is providing 3 bottles of AH-IMMUCURE i.e. A, B and C. Each bottle contains 60 capsules. In a day one patient has to take 2 capsules from each bottle in two divided doses i.e. one capsule each of A, B & C in the morning and again one capsule each in the evening.

Q-19) Any comments on tapering of dosage?

AHI does not recommend reducing the dose. Once it will be under control, AHI suggests continuing medicine as it is. AIDS is such a big problem and it is better not to take any chance.

Q-20) You said patients will become normal in just two months? Is this uniform for all?

No, it is not uniform for all and will vary from patient to patient. Basically, it depends upon how much immunity has been compromised in an individual. In last trial, AHI took 10 years old case where immunity was almost nil. Definitely it took longer period to bring back the immunity to the normal level in that particular patient.

In those cases where AHI mentioned 2 to 6 months, patients were freshly diagnosed HIV positive with very little immunity compromised till that time. [pl see video in testimonials]

Q-21) Please explain the Allopathic course of AIDS.

1) AIDS----- leading to infect cd4-----apoptosis -----removal of abnormal cd4----- decrease cd4 count----- decrease immunity-----Further secondary infections----- further loss in immunity--- fatal systemic failure----- death of patient=====process slow down due to Anti-retroviral drugs

-----2)AIDS -----Retroviral after 3 to 4 months mutagenic effect of virus , drug failed to control virus multiplication----- --

switch over to new drug ----- and so on

Q-22) Please explain your Ayurvedic course of AIDS.

AIDS----- leading to infect cd4-----apoptosis -----removal of abnormal cd4 -----decrease cd4 count---- x----decrease immunity ---x----- secondary infection---x----- further loss in immunity-- x-fatal systemic failure--- x----death of patient=====With AH-IMMUCURE A/B/C, AHI cut down cycle by Re-booting immunity at one side and other side by control virus multiplication without failure from mutagenic nature of virus.

Q-23) Please explain the type of trial you did.

AHI did direct randomized control trial in AIDS patients who gave their consent and volunteered for the trial.

Q-24) what was the purpose of last trial?

To evaluate our final patent medicine on one of the oldest patients to see it's effect. Also to provide testimonials from authentic laboratory. [PI sees video in testimonials]

Q-25) Please explain variation in dose?

Adults: it is 500 mg capsule each of AH-IMMUCURE A, B & C twice daily irrespective of sex and height of patients. Here AHI divided the course of medicine as per age not as per body weight which is a usual trend in allopathic medicines due to short safety margin and high risk of side effects. May be AHI need to change dose pattern after getting variation in effects continental wise.)

Children: Above 5 years of age, AHI recommends 250 mg of each A, B & C twice daily and below 5 years 125 mg of each twice daily.

Please note that for children the content (powder) of each capsule (A/B/C) to be divided in two or four equal parts and given to the children along with water, milk or honey.

Q-26) What protocol do you suggest if one partner is HIV positive but another negative?

If RNA quantification shows virus load is negative and HIV test is also negative, AHI treats them as a potential HIV carrier. Here AHI will treat both the cases at a same level taking one partner with active disease and another partner as definite carrier.

This is to prevent the transmission and later conversion into HIV positive.

If the patient is single and RNA test and HIV test are negative but have history of remaining in regular contact with HIV positive partner, AHI still recommends same full treatment along with regular watch on immunity by six monthly assessments.

If the patient is single and RNA test plus HIV test all are negative but

have history of accidental exposure to HIV positive partner AHI still recommends same full treatment along with regular watch on immunity by six monthly assessment followed by keeping a watch for next few years.

Here basic theme is that AHI consider HIV-ve partner under strict watch and do regular screening of Immunity level and viral load survey to see what results AHI gets after providing preventive treatment.

Q-27) How would you judge cure in HIV negative carrier?

When HIV test becomes negative from HIV positive. But still unclear as till date AHI is not able to comment on cure.

Q-28) Please suggest if one partner is HIV positive and another negative, what protocol you suggest in their kids who are HIV negative?

See answer of question 26.

Q-29) Please suggest in HIV positive kids/children?

Same as HIV + patients.

Main problem here is that in children below ten years it is required to maintain immunity from external sources and give medicine till cure is not achieved. (Naturally Immunity type Ig-m reached normal adult level in children between 7 to 8 yrs. and Immunity type Ig-g up to 1 yrs.) After 8 years no external source is required to maintain immunity but only AH-Immucure is good enough to treat them as in adults.

So if children below 8 years get affected, there is a problem as one side immunity is not developed (so they are under immune) and on the other hand AIDS stop normal mechanism to manufacture new immune cells.(AHI provides update on outcome in AIDS affected parent's kids and observe what result AHI gets which helps us to form protocol for treatment of AIDS in Children below 10 years and above 10 years in different situations.

Q-30) What AHI recommends for children below 15 years?

Children below 10 years should take mothers breast feed along with AH-IMMUCURE. This way they get extra immunity from mother's milk to fight against infection.

Here Up to 5 years give AHI 125 mg in two divided dosage.

Between 5 to 10 yrs. full treatment with 125 mg twice daily

Between 10 to 15 yrs. full treatment with 250 mg twice daily.

Above 15 yrs. full 500 mg capsules as in adults twice daily

Q-31) In children If you control AIDS virus then what AHI recommends for immunity?

Before AIDS patient starts treatment of AHI, the research team do full study of disease pattern in patients and access their present immunity status. AHI recommend breast feeding along with treatment. Immunoglobulin can be infused for very low immunity level to get immediate relief.

Q-32) How do you claim that your medicine is safe in long run?

AHI took all the data from well-known Ayurvedic text books wherein all the ingredients used in AH-IMMUCURE have already been used since long time without showing any significant side effects. AH-IMMUCURE contains almost one tenth of each ingredient mentioned in the text books.

Till date AHI did not come across any serious side effect except acidity in some patients. Therefore we can say that AH-IMMUCURE is safe even if it is used for a long period. (Also see question number 40). During the trial, AHI also did screening test on regular bases for functions of liver, kidney etc.

Q-33) Do you recommend any continent wise dose variation?

As of now, we do not recommend any continents wise dose variation. AH-IMMUCURE samples were sent to Tanzania (Africa) for clinical trial purpose and same results were found as got in Indian patients with same dosage schedule. As per trials conducted till date, AH-IMMUCURE gives desired results in middle class Indian population with just 500mg twice daily dose. In future, AHI will collect data from doctors through its marketing associates/partners in different countries to see if any continent wise dose variation required .

Q-34) What type of marketing do you suggest?

Since, the medicine is a bit expensive and might be beyond reach of middle & lower middle class population , AHI suggests that it should be distributed through Government / NGOs or AIDS agencies.

Q-35) How can you say that the trials conducted by Anupam Herbals are of that level that you can market the product?

AHI did trials on normal adult AIDS patients. As AH-IMMUCURE has shown significant results in bringing back the immunity to normal level along with other benefits, therefore it is worth using in AIDS patients to reduce morbidity and mortality of young population. Simultaneously, AHI is doing further research to achieve cure too.

Q-36) Can anyone use this medicine as a normal immunity booster in health HIV negative cases.

Since, It is a costly medicine specially formulated for AIDS patients. It is complete treatment for AIDS and not only an immunity booster, therefore AHI does not recommend it for general use. For normal Immunity booster, AHI has other research products. For African continent, AHI has developed an immunity booster formulation which upon regular use prevents the general population from malaria,

cough & cold etc.

Q-37) Can AHI provides testimonials to prove its points?

Yes! please see page 3 of www.anupamherbalsindia.com

Q-38) What all certifications do you have ?

AH-IMMUCURE is being manufactured by WHO-GMP, US-NSF, HACCP, GMP-Ayush Certified company Maxcure Neutravedics Ltd. a subsidiary of India's number 1 contract manufacturing company ; Akums Drugs & Pharmaceuticals Ltd. situated in Haridwar (Uttarakhand), India. Akums plants have number of international accreditations and exporting its world class formulations to various countries across the globe.

Anupam Herbals is also registered with Pharmaxcil for export.

Q-39) Can AHI proves that the medicine is safe?

All the contents are very well described by Indian Government in Indian Ayurvedic pharmacopeia and used since ages.

Q-40) When AHI will get patent?

AHI already filed for US patent [61739157] and PCT for 164 countries as per Paris convention.

Q-41) what type of patent is this?

This covers the whole world (164 countries) called the world intellectual property right.

Q-42) Will AH-IMMUCURE reduces time period of the treatment?

Till AHI will not achieve cure, it is difficult to comment on this. For

reducing the immunity reversal period, definitely if we infuse immunoglobulin or blood transfusion, we can fasten the effect of AH-IMMUCURE and reduced the morbidity and mortality in those patients who have very low immunity and die because of multiple systemic infections and organ failure.
